

IN THE CLAIMS:

Please cancel Claims 11-15 and 30-37 without prejudice or disclaimer of the recited subject matter.

Please amend Claims 27, 28, 38, 46, 47, 50, and 55 as shown below. A marked-up version showing the amendments is included in the attached APPENDIX. For the Examiner's convenience, all of the pending claims are presented below, regardless of whether the claim is currently being amended.

1. A data processing apparatus comprising:

data analysis means for extracting data control information from data provided with the data control information to be used for restricting various processes;

data processing means for performing various processes for the data added with the data control information;

display means for displaying a process function of each of the various processes to be executed by said data processing means; and

control means for controlling said data processing means and said display means in accordance with the data control information extracted by said data analysis means,

wherein said control means inhibits to execute an inhibited process in accordance with the data control information extracted from the data and controls said display means to change a display style of the process function of each of the various processes to an inhibition display style.

2. A data processing apparatus according to claim 1, wherein said control means controls said display means to display a notice that the data is provided with a process restriction.

3. A data processing apparatus according to claim 1, wherein said control means controls said display means to display a disabled execution when the inhibited process is selected.

4. A data processing apparatus according to claim 1, wherein said control means controls said display means to change a display color as the inhibition display style.

5. A data processing apparatus according to claim 1, wherein said control means controls said display means to blink a display as the inhibition display style.

6. A data processing apparatus according to claim 1, wherein the data control information includes copyright information or editing inhibition information based upon the copyright information.

7. A data processing apparatus according to claim 6, wherein the editing inhibition information includes at least one of color conversion, sharpness, transparency, boundary process, inversion, overlap, rotation, mask, insertion to photo frame, and mixture.

A

8. A data processing apparatus according to claim 6, wherein the editing inhibition information is information for stepwise restricting process contents in accordance with an editing inhibition level of the information.

9. A data processing apparatus according to claim 8, wherein said control means inhibits to execute an inhibited process in accordance with the editing inhibition level.

10. A data processing apparatus according to any one of claims 1 to 9, wherein the data is image data.

16. A data processing system comprising:

a data supplying apparatus for distributing data and corresponding data control information in response to a data distribution request; and

a data processing apparatus for restricting to executed an inhibited process in accordance with the data control information extracted from the data and controlling display means to determine a display style of a process function of each of various processes, wherein:

said data supplying apparatus comprises: storage means for storing and managing the data and data control information; registration means for registering the data and the data control information in said storage means; and data control information providing means responsive to the data distribution request for extracting the data control information corresponding to the data and adding the data control information to the data; and

said data processing apparatus comprises: data analysis means for extracting the data control information from the data provided with the data control information to be used for restricting the various processes; data processing means for performing the various processes for the data added with the data control information; display means for displaying a process function of each of the various processes to be executed by said data processing means; and control means for controlling said data processing means and said display means in accordance with the data control information extracted by said data analysis means,

wherein said control means inhibit to execute an inhibited process in accordance with the data control information extracted from the data and controls said

display means to change a display style of the process function of each of the various processes to an inhibition display style.

17. A data processing system according to claim 16, wherein said control means controls said display means to display a notice that the data is provided with a process restriction.

18. A data processing system according to claim 16, wherein said control means controls said display means to display a disabled execution when the inhibited process is selected.

19. A data processing system according to claim 16, wherein said control means controls said display means to change a display color as the inhibition display style.

20. A data processing system according to claim 16, wherein said control means controls said display means to blink a display as the inhibition display style.

21. A data processing system according to claim 16, wherein the data control information includes copyright information or editing inhibition information based upon the copyright information.

22. A data processing system according to claim 16, wherein the data is image data.

A

23. A data processing system according to claim 16, wherein the data control information includes copyright information and a editing inhibition code based on the copyright information.

24. A data processing system according to claim 23, wherein the editing inhibition information includes at least one of color conversion, sharpness, transparency, boundary process, inversion, overlap, rotation, mask, insertion to photo frame, and mixture.

25. A data processing system according to claim 23, wherein the editing inhibition information is information for stepwise restricting process contents in accordance with an editing inhibition level of the information.

26. A data processing system according to claim 25, wherein said control means inhibits to execute an inhibited process in accordance with the editing inhibition level.

27. (Amended) A computer readable storage medium storing a program for
executing:
an extracting step of extracting data control information from data provided
with the data control information to be used for restricting various processes; and
a display step of displaying a process function to be restricted in accordance
with the data control information extracted by said extracting step,

~~38. (Amended) A data processing apparatus comprising:~~
~~data processing means for processing data;~~
~~control means for regulating a process to be executed for the data by said~~
~~data processing means in accordance with control information which restricts to execute~~
~~the process at a plurality of levels; and~~
~~display means for displaying information, said display means changing a~~
~~display style in accordance with the control information.~~

39. A data processing apparatus according to claim 38, further comprising:
data requesting means for issuing a request for a distribution of the data to a
data supplying apparatus;

extracting means for extracting presence information indicating a presence/absence of the control information added to the data distributed in response to the request; and

control information requesting means for requesting for the control information to the data supplying apparatus in accordance with the extracted presence information.

40. A data processing apparatus according to claim 39, further comprising display means for displaying the distributed data, presence information and control information.

41. A data processing apparatus according to claim 39, wherein said control information requesting means issuing the request as well as additional information on the data processing apparatus.

42. A data processing apparatus according to claim 38, further comprising transferring means for transferring registration information on the data processing apparatus to the data supplying apparatus.

43. A data processing apparatus according to claim 39, wherein the presence information is a data management number.

44. A data processing apparatus according to claim 39, wherein the presence information is a network address.

45. A data processing apparatus according to claim 38. wherein the data is image data.

46. (Amended) A data processing system comprising:

51B
B3

a data supplying apparatus comprising distributing means responsive to a data distribution request for distributing data and control information for restricting various processes to be performed for the data at a plurality of levels, to a distribution requesting side; and

A3

a data processing apparatus comprising: data requesting means for issuing a request for a distribution of the data to the data supplying apparatus; data processing means for processing the data; control means for regulating the data processing to a level represented by the distributed control information; and display means for displaying information, said display means changing a display style in accordance with the control information.

47. (Amended) A computer readable storage medium storing a program executing:

a distributing step of distributing, in response to a data distribution request, data and control information for restricting various processes to be performed for the data at a plurality of levels, to a distribution requesting side; and

a display step of displaying the process function of each of the various processes.

48. A computer readable storage medium according to claim 47, wherein said distributing step includes a step of acquiring the data from storage means for storing the data and the control information, in response to the data distribution request, a step of checking a presence/absence of the control information corresponding to the acquired data, a step of distributing the acquired data provided with presence/absence information to the distribution requesting side, and a step of, in response to a control information request after the distribution, distributing the control information to the requesting side.

49. A computer readable storage medium according to claim 48, said program further executes a step of registering the data and the control information in said storage means in one-to-one correspondence.

50. (Amended) A computer readable storage medium storing a program
executing:
a step of processing data;
a step of regulating a process to be executed for the data by said data
processing step in accordance with control information which restricts to execute the
process at a plurality of levels; and
a step of displaying a process function of the process.

A

51. A computer readable storage medium according to claim 50, wherein the program further comprises:

a step of issuing a request for a distribution of the data to a data supplying apparatus;

a step of extracting presence information indicating a presence/absence of the control information added to the data distributed in response to the request; and

a step of requesting for the control information to the data supplying apparatus in accordance with the extracted presence information.

52. A computer readable storage medium according to claim 51, wherein the program further comprises a step of displaying the distributed data, presence information and control information.

53. A computer readable storage medium according to claim 48 or 51, wherein the presence information is a data management number.

54. A computer readable storage medium according to claim 48 or 51, wherein the presence information is a network address.

55. (Amended) A computer readable storage medium storing a program executing:

a step, to be executed at a data supplying apparatus, of distributing, in response to a data distribution request, data and control information for restricting various

processes to be performed for the data at a plurality of levels, to a distribution requesting side; and

steps, to be executed at a data processing apparatus, of issuing a request for a distribution of the data to the data supplying apparatus, of processing the data, of regulating the data processing to a level represented by the distributed control information; and of displaying the process function of each of the various processes.

56. A computer readable storage medium according to any one of claims 47, 50 and 55, wherein the data is image data.

Please add new Claims 57 and 58 as follows:

57. A computer readable program for executing the steps of:

extracting data control information from data provided with the data control information to be used for restricting various processes;

performing various processes for the data added with the data control information;

displaying a process function of each of the various processes to be performed; and

controlling the performing and the displaying in accordance with the extracted data control information,

wherein said controlling inhibits execution of an inhibited process in accordance with the data control information extracted from the data and controls the
